London International Airport  
Terminal Expansion

## London International Airport Terminal Expansion

The revitalized London International Airport, Passenger Terminal Expansion, services airlines on a domestic and international/trans-border/charter basis. The expansion of the passenger terminal was a result of an anticipated 90-110% increase in passenger loads and a desire to re-brand its public image within the aviation and business industry. As a means of addressing this challenge the new addition stretches across the groundside façade of the existing terminal providing a new entrance concourse, enlarged passenger holding room, new departure and arrival gates and offices for the Airport Authority. In all, the building area increased 250% from 37,000 s.f. to 92,500 s.f. An over arching canopy spans across the pick-up/drop-off drive aisle, protruding against the backdrop of the transparent concourse. Phased construction techniques were successfully implemented allowing the terminal to remain fully operational during construction.
